

Cost Calc

This model gives you the possibility to calculate costs between Asia

Single Voyage Cost Comparison

This option gives you the possibility to compare different route alternatives for a single voyage. It also allows you to run different sensitivity analysis for key variables.

Explana

Choose your preferred calculation method by clicking directly sheet. The cells marked in red are the input cells. Choose your results or run a sensitivity analysis, choose between the alternatives be presented in a new Excel book. Further explanation

Brevik a

Calculation Model

Calculate the costs for a container vessel sailing different routes around the world and the U.S. East Coast.

Round-Trip Calculation

This option gives you the possibility to calculate a round-trip voyage. It also calculates the annual result for the chosen round-trip.

Navigation to the model:

Click on one of the options presented above. This will take you to a calculation sheet where you can enter input values and the model will calculate itself. If you want to export your data, you can export the data presented on the right side in the calculation sheet. The results will be presented in the model can be found in Appendix 3 in our research paper.
