#### Abstract

We construct the coauthorship network based on the scientific collaboration between the faculty members at the Norwegian Business School (BI) and based on their international academic publication experience. The network structure is based on the BI faculties' publications recognized by the ISI Web of Science for the period 1950 - Spring, 2014. The given network covers the publication activities of the BI faculty members (over eight departments) based on the information retrieved from the ISI Web of Science in Spring, 2014. In this paper we analyse the constructed coauthorship network in different aspects of the theory of social networks analysis.

Keywords: coauthorship networks, social networks analysis.

## 1. INTRODUCTION

Social networks analysis (SNA) is a powerful tool to analyse the interpersonal relations and different types of cooperation between the variety of social groups such as the research or business communities, governmental or private institutions etc. The uniqueness of SNA is its interdisciplinary approach that combines sociology, graph theory, mathematics, psychology etc. (Knoke \& Yang, 2008). In contrast to pure network analysis SNA is not concentrated on the structural measurement only, but it takes into consideration the multifactorial social aspects of relations (Carrington, Scott, \& Wasserman, 2005).

In this study we build the BI (Norwegian Business School, Oslo) social network based on the coauthorship relations between the faculty members. The resulted BI coauthorship network is constructed based on the information retrieved from the ISI Web of Science as of April - May, 2014 (ISI Web of Science, 2014). ISI Web of Science provides the online scientific citation indexing service of the highly qualified journals from cross-disciplinary areas. It is important to notice that we use the ISI Web of Science as the only source to retrieve the information regarding the BI faculty members’ publications in the period 1950 - Spring, 2014. The resulted BI coauthorship network covers eight BI departments:

1. Department of Accounting, Auditing and Law;
2. Department of Communication and Culture;
3. Department of Economics;
4. Department of Finance;
5. Department of Innovation and Economic Organisation;
6. Department of Leadership and Organizational Behaviour;
7. Department of Marketing;
8. Department of Strategy and Logistics.

* Textual description is based on Belik, I., \& Jornsten, K. (2014)

The coauthorship network's nodes correspond to the faculty members, and the links (i.e., edges) between them correspond to the existence of common publications. Every edge has a weight, which is the number of joint publications. We consider not only the internal departmental and interdepartmental relations between the faculty members, but also we show the external publications with authors that are not affiliated with BI. These "external" coauthors are grouped into the country-nodes. For example, if "external" author A and "external" author B specify their affiliation with country N in their publications then both A and B are grouped into one node N . As the result, we show the research cooperation of the BI faculty members on the international level.

In section 2 we show the position of each faculty member within the BI coauthorship network including the internal departmental, interdepartmental and external coauthorship relations. Also, we provide the number of publications, which are done by each faculty member. The results are represented in tabular and graphical formats.

Section 3 is devoted to the analysis of coauthorship cliques between the faculty members. Since cliques (Hanneman \& Riddle, 2005) correspond to the groups of faculty members that have strong coauthorship relations, we analyze the BI coauthorship network to detect such groups (i.e., cliques) on the departmental and interdepartmental levels.

In section 4 we analyze the BI coauthorship network based on the spanning trees’ detection (West, 2001). Spanning tree's analysis is the way to understand the spread of the research interests over the whole BI coauthorship network. Moreover, due to the fact that the BI coauthorship network is represented by the disconnected graph, we analyze it in terms of the interdepartmental spanning forest (Bollobás, 1998).

In section 5 we analyze the international coauthorship. The analysis is based on the investigation of how many persons (i.e., nodes) at BI coauthorship network should be deleted in order for the international coauthorship to be vanishing.
The overall publications-based analysis is represented in section 6 . Specifically, we analyze the contribution of the most published faculty members to the overall BI research activity.

## 2. PERSONAL INTERNAL, EXTERNAL AND OVERALL COAUTHORSHIPS

For each faculty member we analyse the number of departmental, interdepartmental, and external (i.e., not affiliated with BI ) collaborations and the number of the published papers based on the ISI Web of Science. We provide the details for each department in tabular and graph-based formats.
In Tables 1-9 and in Figures 1-25 we provide the information regarding the internal, interdepartmental and external coauthorship for each faculty member. The values given in Tables 1-9 correspond to the number of coauthors and to the number of publications for each faculty member. In Figures 1, 4, 7, 10, 13, 16, 19 and 22 we provide the information regarding the number of coauthors versus the number of publications for each faculty member.
The networks of the internal (i.e., departmental) coauthorship are represented in Figures 2, 5, 8, 11, 14, 17, 20 and 23 for each department. The overall departmental networks that include the internal, interdepartmental and external coauthorship are represented in Figures 3, 6, 9, 12, 15, 18,21 and 24.

### 2.1 Department of Accounting, Auditing and Law

Table 1. Coauthorship and the number of publications by persons

Figure 23. Department of Strategy and Logistics - the internal coauthorship network

Figure 24. Department of Strategy and Logistics - the overall coauthorship network

### 2.9 The interdepartmental coauthorship network

There are 27 BI faculty member that are involved in the interdepartmental collaboration: nine from the Department of Leadership and Organizational Behaviour; eight - from the Department of Strategy and Logistics; three - from the Department of Communication and Culture; three from the Department of Innovation and Economic Organisation; one - from the Department of Economics, and one - from the Department of Marketing (see Table 9).

Table 9. Faculty members with interdepartmental coauthorship

| Department of Leadership and Organizational Behaviour |  | Department of Strategy and Logistics |  | Department of Communication and Culture |  | Department of Accounting, Auditing and Law |  | Department of Innovation and Economic Organisation |  | Department of Economics |  | Department of Marketing |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | node 154 | 1 | node 224 | 1 | node 56 | 1 | node 11 | 1 | node 138 | 1 | node 78 | 1 | node 212 |

| 3 | node 168 | 3 | node 234 | 3 | node 67 | 3 | node 43 |  |  |  |  |  |  |
| 4 | node 170 | 4 | node 240 |  |  |  |  |  |  |  |  |  |  |
| 5 | node 171 | 5 | node 241 |  |  |  |  |  |  |  |  |  |  |
| 6 | node 175 | 6 | node 242 |  |  |  |  |  |  |  |  |  |  |
| 7 | node 179 | 7 | node 245 |  |  |  |  |  |  |  |  |  |  |
| 8 | node 180 | 8 | node 250 |  |  |  |  |  |  |  |  |  |  |
| 9 | node 187 |  |  |  |  |  |  |  |  |  |  |  |  |

The detailed representation of the interdepartmental coauthorship is represented in Figure 25.

Figure 25. The interdepartmental coauthorship network

## 3. CLIQUES' ANALYSIS

The group of people that is interconnected by the socially strong relations form a clique (Luce \& Perry, 1949). In terms of graph theory, every pair of persons in the group, forming the clique, has to be connected by an edge. Specifically, in terms of the research collaboration, the faculty members form cliques if each of them has published the joint scientific paper(s) with all other clique members.

In terms of this paper, we are looking for the maximum cliques and the $k$-cliques (with $k \geq 3$ ) in the coauthorship networks within the departmental and interdepartmental collaborations, where $k$ is the number of faculty members forming the clique. Maximum clique is the largest group of faculty members that are collaborating in terms of publishing joint papers.
Finding the maximum clique is an NP-complete problem, and there are no algorithms solving the problem in polynomial time (Östergård, 2002). However, finding the maximum clique in comparatively small graphs, such as the BI coauthorship network, is a feasible task.

### 3.1 Departmental cliques

There are seven cliques of size $k=3$, which are represented within three departments out of eight:

1. Department of Leadership and Organizational Behaviour;
2. Department of Marketing;
3. Department of Strategy and Logistics.

All seven three-vertex cliques are represented in Figure 26:

Figure 26. Three-vertex cliques within three departments

Cliques in the Department of Leadership and Organizational Behaviour:
(a) node 168 - node 175 - node 187;
(b) node 162 - node 179 - node 184;
(c) node 162 - node 167 - node 171 .

Cliques in the Department Marketing:
(d) node 198 - node 210 - node 220;
(e) node 210 - node 217 - node 220;
(f) node 192 - node 209 - node 215.

Cliques in the Department Strategy and Logistics:
(g) node 229 - node 235 - node 248;

According to Figure 26 the core clique-based structure of the Department of Leadership and Organizational Behaviour is interconnected by the only hub-node "node 181" that is out of any clique, but it has publications with the members from both (a) and (b) cliques. Cliques (b) and (c) are connected to each other by the joint component "node 162". In the Department of Marketing cliques (d) and (e) are interconnected by the joint components "node 220" and "node 210".

### 3.2 Trans-departmental cliques

The trans-departmental clique is the clique where $k \geq 3$ and at least two clique members are the members of different departments. In this case, we are not interested in two-vertex transdepartmental cliques, because they simply correspond to the single interdepartmental links. This type of links is reported in Section 2.9.
There are three trans-departmental cliques detected in the BI coauthorship network (see Figure 27).

Figure 27. Trans-departmental cliques’ structure

The maximum trans-departmental clique consists of five faculty members: "node 168 ", "node 175 ", "node 187", "node 224", and "node 242". It is detected within two departments:

1. Department of Leadership and Organizational Behaviour;
2. Department Strategy and Logistics.

The second and third trans-departmental cliques are detected within the following departments:

1. Department of Leadership and Organizational Behaviour;
2. Department of Communication and Culture.

Specifically, there are two three-vertex cliques that contain the following faculty members:

1. "node 66" - "node 162" - "node 179";
2. "node 66" - "node 162" - "node 171";

It is important to notice the maximum clique is interconnected with the three-vertex cliques by the only hub "node 181" (see Figure 27). Obviously, the role of this hub is critical due to its "bottleneck"-nature. The deletion of this node would lead to the disconnection of two largest cliques-based trans-departmental sub-graphs.

## 4. SPANNING TREES AND SPANNING FORESTS

We analyze the interdepartmental coauthorship networks in order to detect the spanning trees and forests. Spanning tree is the minimal set of the network's edges (i.e. links) that connect the maximal number of nodes (i.e. faculty members) with no cycles (Cormen, Leiserson, Rivest, \& Stein, 2003). Due to the fact that BI coauthorship network is represented by the set of disconnected graphs, we are looking for the set of spanning trees of the disconnected components, which is called a spanning forest (Bollobás, 1998).

Analyzing cliques in Section 3 we detected the groups of the most strongly connected faculty members in terms of the coauthorship, but detecting the spanning trees we are looking for the overall affiliation of the faculty members within the BI research community. Spanning forest structure ignores the detailed interpersonal relations due to the requirement to avoid cycles, but it shows the spreading of the different research interests over the BI coauthorship network. In this section we analyze the spanning forest for the interdepartmental relations (i.e., trans-departmental spanning forest).
Trans-departmental spanning forest is the set of interdepartmental spanning trees, where at least one edge in each of these trees connects the faculty members from different departments.
The overall trans-departmental spanning forest is formed based on the coauthorship network of seven departments:

1. Department of Accounting, Auditing and Law;
2. Department of Communication and Culture;
3. Department of Economics;
4. Department of Innovation and Economic Organisation;
5. Department of Leadership and Organizational Behaviour;
6. Department of Marketing;
7. Department of Strategy and Logistics.

The spanning forest structure is represented in Figure 28.

Figure 28. Trans-departmental spanning forest
According to Figure 28 the spanning forest consists of six spanning trees.
The maximal spanning tree (see Figure 29) covers four departments and includes 28 faculty members listed in Table 10.

Table 10. Maximal spanning tree in the trans-departmental forest

| Department of Leadership and Organizational Behaviour |  |  |  | Department of Strategy and Logistics |  | Department of Communication and Culture |  | Department of Innovation and Economic Organization |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | node 155 | 9 | node 171 | 17 | node 224 | 27 | node 66 | 28 | node 138 |
| 2 | node 157 | 10 | node 175 | 18 | node 227 |  |  |  |  |
| 3 | node 162 | 11 | node 176 | 19 | node 229 |  |  |  |  |
| 4 | node 163 | 12 | node 179 | 20 | node 230 |  |  |  |  |
| 5 | node 166 | 13 | node 181 | 21 | node 233 |  |  |  |  |
| 6 | node 167 | 14 | node 182 | 22 | node 234 |  |  |  |  |
| 7 | node 168 | 15 | node 184 | 23 | node 235 |  |  |  |  |
| 8 | node 169 | 16 | node 187 | 24 | node 242 |  |  |  |  |
|  |  |  |  | 25 | node 248 |  |  |  |  |
|  |  |  |  | 26 | node 249 |  |  |  |  |

Figure 29. Maximal spanning tree in the trans-departmental forest
The second largest spanning tree consists of seven faculty member from two departments (see Table 11):

Table 11. The second largest spanning tree in the trans-departmental forest

| Department of Strategy and Logistics |  | Department of Leadership and Organizational Behaviour |  |
| :---: | :---: | :---: | :---: |
| 1 | node 239 | 1 | node 170 |
| 2 | node 241 | 2 | node 174 |
| 3 | node 245 | 3 | node 180 |
| 4 | node 250 |  |  |

The spanning tree that corresponds to Table 11 is represented in Figure 30.

Figure 30. Second largest spanning tree in the trans-departmental forest
The third largest spanning three (see Figure 31) is based on the coauthorship relations between the Department of Accounting, Auditing and Law ("node 11" and "node 43"), the Department of Innovation and Economic Organisation ("node 148"), and the Department of Leadership and Organizational Behaviour ("node 154").

Figure 31. The third largest spanning tree in the trans-departmental forest
The fourth, fifth and sixth spanning trees are two-vertex trans-departmental connections represented in Figure 32.

Figure 32. Fourth, fifth and sixth spanning trees in the trans-departmental forest

## 5. INTERNATIONAL COAUTHORSHIP

In this section we analyse the existing international coauthorship (based on the ISI Web of Science) that cover all countries excepting Norway. We investigate how many faculty members at the BI coauthorship network should be deleted in order for the international coauthorship to be vanishing. To approach this goal we sort the faculty members by the number of international coauthorship (i.e., by the number of coauthors from non-Norwegian institutions) in the descending order. Then, we delete them from the list one by one until we get the international coauthorship vanished. This procedure is done for the BI departments in sections 5.1 - 5.8 and for the overall BI coauthorship in section 5.9.
We represent the results in tabular format (see Tables 12-20) where we provide the following information:

- "number of coauthorship" is the number of international coauthors for the corresponding faculty member;
- "overall after exclusion" is the number of the overall international coauthorship left after excluding the current author and authors excluded earlier in the sorted list.
- "\% out of overall coauthorship" is the percentage of the faculty member's contribution out of the overall BI international coauthorship.
- "Overall \% after exclusion" is the overall percentage of international coauthorship after excluding the current author and authors excluded earlier in the sorted list.
The graphical representation is given in Figures 33-41.

### 5.1 Department of Accounting, Auditing and Law

There are 55 international coauthorships in the Department. The sorted list of faculty members is represented in Table 12. The deletion of 9 out of 52 (approximately, $17 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 2 out of 52 faculty members (i.e., approx. $4 \%$ out of $100 \%$ ) will bring almost $62 \%$ reduction of the departmental international coauthorship.
The given results are represented in Figure 33.

Table 12. Department of Accounting, Auditing and Law: International coathorship by faculty members

Figure 33. Department of Accounting, Auditing and Law: International coauthorship based on the sequential faculty members' deletion

### 5.2 Department of Communication and Culture

There are 53 international coauthorships in the Department. The sorted list of faculty members is represented in Table 13. The deletion of 5 out of 24 (approximately, $21 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 1 out of 24 faculty members (i.e., approx. $4 \%$ out of $100 \%$ ) will bring more than $73 \%$ reduction of the departmental international coauthorship.
The given results are represented in Figure 34.
Table 13. Department of Communication and Culture: International coathorship by faculty members

|  | Faculty | number of coauthorship | Overall after exclusion | \% out of overall coauthorship | Overall \% after exclusion |  | Faculty | number of coauthorship | Overall after exclusion | \% out of overall coauthorship | Overall \% after exclusion |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | node 67 | 39 | 14 | 73.6 | 26.4 | 13 | node 62 | 0 | 0 | 0.0 | 0.0 |

Figure 34. Department of Communication and Culture:
International coauthorship based on the sequential faculty members' deletion

### 5.3 Department of Economics

There are 119 international coauthorships in the Department. The sorted list of faculty members is represented in Table 14. The deletion of 13 out of 29 (approximately, $45 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 2 out of 29 faculty members (i.e., approx. $7 \%$ out of $100 \%$ ) will bring almost $53 \%$ reduction of the departmental international coauthorship. The given results are represented in Figure 35.

Table 14. Department of Economics: International coathorship by faculty members

|  | Faculty | number of coauthorship | Overall after exclusion | \% out of overall coauthorship | Overall \% after exclusion |  | Faculty | number of coauthorship | Overall after exclusion | \% out of overall coauthorship | Overall \% after exclusion |

| 15 | node 80 | 0 | 0 | 0.0 | 0.0 |  |  |  |  |  |  |

Figure 35. Department of Economics:
International coauthorship based on the sequential faculty members' deletion

### 5.4. Department of Finance

There are 64 international coauthorships in the Department. The sorted list of faculty members is represented in Table 15. The deletion of 10 out of 24 (approximately, $42 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 2 out of 24 faculty members (i.e., approx. $8 \%$ out of $100 \%$ ) will bring more than $56 \%$ reduction of the departmental international coauthorship. The given results are represented in Figure 36.

Table 15. Department of Finance: International coathorship by faculty members

|  | Faculty | number of coauthorship | Overall after exclusion | \% out of overall coauthorship | Overall \% after exclusion |  | Faculty | number of coauthorship | Overall after exclusion | \% out of overall coauthorship | Overall \% after exclusion |

Figure 36. Department of Finance:
International coauthorship based on the sequential faculty members' deletion

### 5.5 Department of Innovation and Economic Organisation

There are 61 international coauthorships in the Department. The sorted list of faculty members is represented in Table 16. The deletion of 7 out of 24 (approximately, 29\% out of 100\%) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 1 out of 24 faculty members (i.e., approx. $4 \%$ out of $100 \%$ ) will bring almost $50 \%$ reduction of the departmental international coauthorship. The given results are represented in Figure 37.

Table 16. Department of Innovation and Economic Organisation: International coathorship by faculty members

Figure 37. Department of Innovation and Economic Organisation: International coauthorship based on the sequential faculty members' deletion

### 5.6 Department of Leadership and Organizational Behaviour

There are 261 international coauthorships in the Department. The sorted list of faculty members is represented in Table 17. The deletion of 20 out of 38 (approximately, $53 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 3 out of 38 faculty members (i.e., approx. $8 \%$ out of $100 \%$ ) will bring almost $54 \%$ reduction of the departmental international coauthorship.
The given results are represented in Figure 38.
Table 17. Department of Leadership and Organizational Behaviour: International coathorship by faculty members

Figure 38. Department of Leadership and Organizational Behaviour: International coauthorship based on the sequential faculty members' deletion

### 5.7 Department of Marketing

There are 239 international coauthorships in the Department. The sorted list of faculty members is represented in Table 18. The deletion of 18 out of 32 (approximately, $56 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 1 out of 32 faculty members (i.e., approx. $3 \%$ out of $100 \%$ ) will bring more than $53 \%$ reduction of the departmental international coauthorship. The given results are represented in Figure 39.

Table 18. Department of Marketing: International coathorship by faculty embers

### 5.8 Department of Strategy and Logistics

There are 151 international coauthorships in the Department. The sorted list of faculty members is represented in Table 19. The deletion of 20 out of 29 (approximately, $69 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 4 out of 29 faculty members (i.e., approx. $14 \%$ out of $100 \%$ ) will bring more than $53 \%$ reduction of the departmental international coauthorship.
The given results are represented in Figure 40.
Table 19. Department of Strategy and Logistics: International coathorship by faculty embers

Figure 40. Department of Strategy and Logistics:
International coauthorship based on the sequential faculty members' deletion

### 5.9 Overall international coauthorship at BI

The number of the overall international coauthorships is equal to 1003 . The sorted list of faculty members is represented in Table 20. The deletion of 102 out 252 of (approximately, $40 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of the international coauthorship. It is important to notice that the deletion of only 11 out of 252 faculty members (i.e., approx. $4 \%$ out of $100 \%$ ) will bring almost $50 \%$ reduction of the BI international coauthorship.
The given results (in percentage terms) are represented in Figure 41.

Table 20. Overall international coathorship by faculty members at BI

|  | Faculty | number of coauthorship | Overall after exclusion | \% out of overall coauthorship | Overall \% after exclusion |  | Faculty | number of coauthorship | Overall after exclusion | \% out of overall coauthorship | Overall \% after exclusion |

## 6. THE PUBLICATIONS-BASED ANALYSIS

In this section we analyze the research activity of the BI faculty members in terms of the publications indexed by the ISI Web of Science. Initially, we extracted the faculty members that have at least 20 publications and sorted them in the descending order. Next, we start to delete the faculty members from the sorted list one by one in order to track the overall research contribution of the most published faculty members. The results are represented in Table 21 and in Figure 42.

The number of publications of all BI faculty members is equal to 1295. Based on the results represented in Table 21 and in Figure 42 we detected that the deletion of persons, who have at least 20 publications, will bring $40 \%$ reduction of the overall BI faculty member's publications. Specifically, the deletion of 16 out of 252 (approximately, $6 \%$ out of $100 \%$ ) faculty members will lead to the vanishing of $40 \%$ of publications.

Table 21. Overall publications by faculty members at BI

|  | Faculty | number of <br> publications | Overall after <br> exclusion | \% out of <br> overall <br> publications | Overall \% after <br> exclusion |
| :---: | :--- | :---: | :---: | :---: | :---: |
| 1 | node 166 | 70 | 1225 | 5.4 | 94.6 |
| 2 | node 223 | 59 | 1166 | 4.6 | 90.0 |

## 7. CONCLUSION

In the given research we constructed the BI coauthorship network based on the information retrieved from the ISI Web of Science. We analyzed the publications in the period 1950 - Spring, 2014 for the current BI faculty members. The results were represented in tabular and graphical formats. First, we showed the departmental, interdepartmental and external publications for each faculty member. The diversified representation of the overall coauthorship was combined with the information regarding the number of publications done by each faculty member.
Next, we analyzed the strongly connected research groups (i.e., cliques) on the interdepartmental level. The importance of this analysis is based on the necessity of detection and clear representation of the research groups and their interactions between each other. The analysis of spanning trees and forests helped to visualize the spread of the research interests by the faculty members from different departments over the whole BI coauthorship network. In fact, we draw the clear picture of how faculty members from different departments are connected to each other in the diversified "chains" of varying research interests.

We analyzed the international coauthorship for every department separately and for the overall BI without splitting the faculty members according to their departments’ affiliations. Based on this analysis we made the representation of the faculty members' international relations (based on the ISI Web of Science). Also, it helped to detect the groups of faculty members that make the most contribution to the BI's international research collaboration.
Finally, we analyzed the research activity of the BI faculty members based on the number of publications registered in the ISI Web of Science.

It is important to notice that the results regarding the publications counted in the given research were retrieved in the different periods of Spring, 2014. This is due to the fact that the process of extraction, filtering and systemizing of the required information is time consuming. Therefore, we would like to specify that the retrieved information could be updated and changed since its last extraction. Also, we would like to note that the detailed information in tabular format is available upon request.

We assume that the given research might be helpful for understanding of what is done by BI faculty members in terms of the scientific research. However, since we have used only one source, the ISI Web of Science, the analysis should be complemented by the use of other sources such as SCOPUS and Google Scholar to get a more complete view of the scientific research activities of the BI faculty. In order to make such an analysis doable all BI faculty members must be registered in Google Scholar with an open profile. In order to use an analysis of this type as a tool for the further planning of BIs research activities and as a tool for strategic development the registrations of research activities should be updated on a regular basis.
